

Did you know...

Teachers in the United States rate their lives better than all other occupation groups, trailing only physicians.

On **which step of the ladder** would you say you personally feel you stand at this time?

On which step do you think you will stand about **five years from now**?

The Cantril Self-Anchoring Scale[†]

Results are based on telephone interviews conducted as part of the Gallup-Healthways Well-Being Index survey with a random sample of 172,286 workers, aged 18 or over, from Jan. 2-Dec. 30, 2012. For results based on the total sample of national adults, one can say with 95% confidence that the maximum margin of sampling error is ± 3.5 percentage points for the smallest group (physicians) but less than ± 1 for larger groups such as professionals, service workers, or managers/executives.
